Education

Bachelor's Degree in Information Technology

Specialization in Big Data Analytics
MARA University of Technology (UiTM), Perlis Campus

August 2022 – July 2024

Arau, Perlis

Diploma in Computer Science

MARA University of Technology (UiTM), Perak Campus

June 2018 – February 2021

Tapah, Perak

Experience

Software Engineer

Kalsym Sdn. Bhd.

February 2025 – August 2026

Petaling Jaya, Selangor

- Developed and maintained cross-platform web and mobile applications using Angular, TypeScript, Ionic, and Capacitor.
- Collaborated with other developers, UI/UX designers, and customer support to deliver production-ready software.
- Maintained existing applications, implemented new features, resolved bugs, and follow coding standards and project requirements.
- Utilized AI-assisted development tools to support debugging, technical research, code analysis, and exploring implementation approaches.

HelloSIM (Mobile Application) & eByzarr (Progressive Web Application)

- Developed and maintained the HelloSIM mobile application while implementing new frontend features and APIs integrations.
- Developed frontend functionality for the integrated eByzarr PWA marketplace.
- Resolved production issues and enhanced user interfaces.
- Built and distributed Android and iOS releases through Google Play Console and Apple TestFlight.

Eastel (Mobile Application & Portal)

- Implemented the EASTEL eKYC workflow and integrated frontend modules with RESTful APIs.
- Developed new features and maintained Angular web and mobile applications.
- Built responsive UI components using Angular Material, Tailwind CSS, and RxJS.
- Managed Android and iOS application releases through Google Play Console and Apple TestFlight.

CelcomDigi WSP Portal

- Assisted in designing Figma mockups and implementing the new web portal.
- Contributed to migrating content and functionality from the legacy website.

Software Engineer Intern

Kalsym Sdn. Bhd.

September 2024 – January 2025

Subang Jaya, Selangor

- Assisted senior developers in developing and maintaining Angular mobile applications, including bug fixes and UI improvements.
- Contributed to the HelloSIM eKYC onboarding workflow, including frontend implementation and testing.
- Collaborated with cross-functional teams to support new feature development and application testing.

Projects

Monolith – Enterprise-Inspired Portfolio Dashboard

Angular 19 • TypeScript • Tailwind CSS • Angular Material

Jun 2026 – Present

- Built an enterprise-inspired developer portfolio to demonstrate modern Angular architecture and frontend engineering practices.
- Implemented simulated authentication using JWT, access/refresh tokens, route guards, HTTP interceptors, and mock REST APIs.
- Developed reusable components, responsive layouts, and modular architecture following production-style frontend practices.
- Live Demo: <https://reaperkai07.github.io/Monolith>

Technical Skills

Languages :

TypeScript, JavaScript, HTML5, CSS3, Kotlin, Python, SQL

Frameworks & Technologies :

Angular, Ionic, Capacitor, Angular Material, Tailwind CSS, RxJS, Node.js

Databases :

MySQL

Tools & Platforms :

Git, GitHub, VS Code, Android Studio, Xcode, Figma, Swagger UI, DBeaver, Postman, Power BI, Jupyter Notebook

Concepts :

RESTful API Integration, AI-Assisted Software Development, Responsive Web Design, Cross-Platform Development, Progressive Web Applications, JWT Authentication, Route Guards, HTTP Interceptors, State Management, Component-Based Architecture, Modular Application Architecture
